Consulting, projecting, set up and maintenance of warehouse facilities

EUROPEAN STANDARD UNI-EN 15635

**PERIODIC INSPECTION OF
SHELVING**

The EUROPEAN STANDARD UNI-EN 15635 "Static storage systems in steel. Usage and maintenance of the storage equipment" declares that it is the responsibility of the user of the warehouse to annually get an inspection of the structures performed by qualified external personnel.

INSPECTION PLAN

Our specialised technicians will undergo a rigorous inspection of your shelving units, controlling the following points:

- General state of the shelving units
- Good condition and suitability of the pallets stored
- Correspondence of the load of the shelves to that indicated by the capacity signs
- Existence and visibility of the capacity signs

- Check of the attachments at the base and of the protections
- Check the levelling of the 3 axis of the shelving, posts and racks
- Check with professional laser tools, gauge/level

- Check of damages by impact to any part of the structure, in particular damage to the uprights and racks
- Condition and efficiency of all components, in particular the legs and the connections upright/rack

- Conditions of the building flooring
- Satisfactory stability of the loading units
- Based on the obsolescence of the shelving and where necessary, inspections will be done at a height using mobile elevating work platform (MEWP)

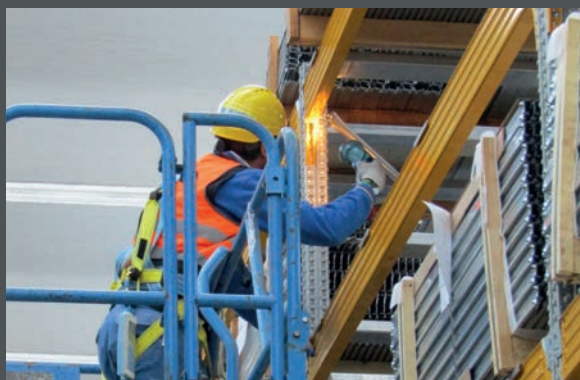

Guaranteeing the **SAFETY** of your warehouse in full compliance of the legislation **IS EXTREMELY EASY!**

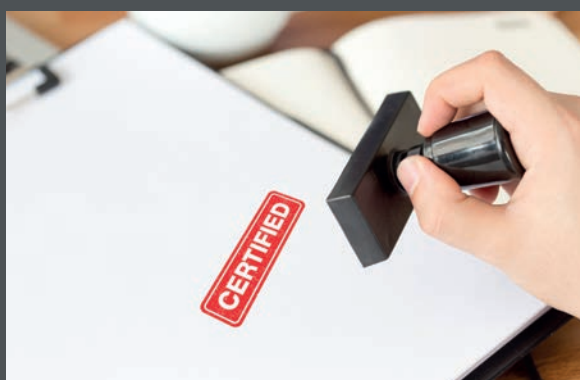

CONTACT

Request your shelving
technical inspection to
info@metalsistemmarche.com
o call the number +39 071 7108660
